SUMMARY

Backend Developer Intern with hands-on experience shipping production features in a live ERP product at Seratek Systems using NestJS, Redis, BullMQ, and CI/CD pipelines.Completed B.Tech in CS & Business Systems (CSE) (CGPA 8.3, KIT Kolhapur, June 2026). Backend-first with working knowledge of React, Android, distributed systems, database design, ML and LLM API integration.

PROFESSIONAL EXPERIENCE

Seratek Systems – Backend Developer **FEB 2026 – SEP 2026**

- Developed a centralized soft-delete mechanism with cascading dependency checks across ERP modules, ensuring referential integrity and safe data retirement without permanent data loss. Redesigned the push notification system with socket rooms, reducing socket calls and user checks by 95%.
- Rearchitected and Configured the existing an OTP-based authentication framework with configurable throttling, cooldown windows, and account lockout policies, mitigating brute-force and replay attack attempts while strengthening ERP platform security.
- Built, integrated, and maintained an SMS gateway from scratch, enabling reliable SMS delivery for OTPs, notifications, and transactional messaging across multiple ERP modules.
- Implemented OAuth 2.0 authentication, enabling secure third-party login and authorization while improving user login workflows. Contributed to sprint planning, pull requests (PRs), code reviews, and design discussions.
- Through collaborative development in a 16-member Agile team, delivering iterative backend features aligned to product milestones, with unit testing workflows and integration tests for new APIs, services, data flows, and error-handling scenarios.
- Handled server-side builds and releases over SSH (live log monitoring for incident debugging, start/stop, env management through azure), verified merged PRs on the test server, and used MongoDB for API validation, bulk data loading and pre-demo backups.

PROJECTS

AI-Powered Adaptive UEBA – Insider Threat & Poisoning Defense System UEBA

Stack: Python, Django/DRF, React, XGBoost, Isolation Forest, SHAP, Claude API, PostgreSQL, Redis, Celery, Docker

- Engineered a hybrid UEBA model training pipeline (XGBoost+SMOTE, Isolation Forest, SVM) with feature engineering of 40+ behavioral features from 15+ GB CMU CERT r5.2 logs: 0.9782 AUC, 0.9412 F1 (+10.6% vs baselines).
- Designed A 4-stage baseline governance layer (drift, peer-anchor, trend checks) held 93% detection vs 22% ungoverned under approx 5%/month poisoning, separating role drift from malicious escalation at 94% accuracy.
- Built an async data pipeline with LLM API integration (Claude), evidence-bounded prompt engineering and SHAP attribution for alert triage (Celery, Redis): 95.6% explanation faithfulness and under 2s dashboard latency; designed a decoupled microservice-style two-environment architecture (<200MB SQLite dev vs Dockerized PostgreSQL training) with multi-turn AI chat analysis.

Black & White Cafe Management & Ordering Platform (Freelance) Cafe

Stack: Flutter, NestJS, React/Next.js, MongoDB, Mongoose, Socket.IO, JWT, REST APIs, Railway, Vercel

- Architected a full-stack cafe platform across Flutter mobile and React/Next.js web, covering menu, guest/authenticated ordering, rewards, bookings, reporting, and live order tracking; accelerated selected features using AI-assisted development (Claude, Cursor).
- Delivered NestJS/MongoDB APIs with JWT, guest sessions, throttling, validation, idempotency, and Socket.IO, with responsive mobile-first interfaces and production deployments on Railway/Vercel.

SmartCrop – AI-Based Crop and Disease Prediction System SmartCrop

Stack: React.js, Node.js, MongoDB, Python, NumPy, Pandas, TensorFlow/PyTorch, PDFKit

- Programmed a data preprocessing pipeline and trained a CNN-based crop disease classifier achieving 88% accuracy on 8,000 images using TensorFlow/PyTorch.
- Introduced validation checks, debugging workflows, code quality assurance, and performance tracking; followed agile development practices and maintained disciplined Git version control, coding standards and best practices. Processed and analyzed datasets using Python, NumPy, and Pandas for model training, statistical analysis, and prediction optimization.

TECHNICAL SKILLS

Languages:	Java, Python, JavaScript, TypeScript
Web & Mobile:	HTML5, CSS3, React, Next.js, Flutter, Android Development (Java)
Backend:	NestJS, Express.js, Django/DRF, MySQL, PostgreSQL, MongoDB, Redis, Celery, Caching
Core Concepts:	Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Tools & AI/ML:	GCP, AWS, Firebase, Docker, Git, GitHub Actions, LLM API Integration, XGBoost, SHAP

EDUCATION

B.Tech - CSBS (CSE)	KIT Kolhapur	(2023 - 2026)	8.3 CGPA
Diploma - CE	Government Polytechnic Miraj	(2020 - 2023)	88.63%

CERTIFICATIONS

GCP:	Google Cloud Arcade Facilitator Program
NPTEL:	Cloud Computing – IIT Kharagpur
Infosys SpringBoard:	Introduction to Data Science

ACHIEVEMENTS

HackerRank:	4-Star Java & SQL; 200+ DSA problems solved.
Leadership:	Vice President & Event Head – COMPESA (College Tech Fest)
